# QuickField simulation report

Bone heating due to drilling

QuickField example demonstrates transient temperature fields in the bone material due to the heat generated during the drilling process.

This automatically generated document consists of several sections, which specify the problem setup and finite element analysis simulation results. Navigation links in the top of each page lead to corresponding sections of this report.

Problem info

Problem type: Transient Heat Transfer (integration time: 20 s.)

Geometry model class: Axisymmetric

Problem database file names:

- Problem: *BoneDrillingTransietHeat.pbm*
- Geometry: *Bonedrilling.mod*
- Material Data: *Bonedrillingtransietheat.dht*
- Material Data 2 (library): *none*
- Electric circuit: *none*

Results taken from other problems:

- *Temperature Field: Initialconditions.pbm*

Geometry model

Table 1. Geometry model statistics

	With Label	Total
Blocks	2	2
Edges	1	7
Vertices	0	6

Number of nodes: 7375.

Labelled objects

There are following labelled objects in the geometry model (Material Data file could contain more labels, but only those labels that assigned to geometric objects are listed)

Blocks:	Edges:	Vertices:
• bone	• BoneSurface	
• channel	•	
•		

Detailed information about each label is listed below.

Labelled objects: block "bone"
There are (1) objects with this label

Thermal conductivity: lambda_x=1 [W/(K*m)],
lambda_y=1 pW/(K*m)]
Specific heat: C=440 [J/(kg*K)]
Mass density: rho=1500 [kg/m3]

## Labelled objects: block "channel"
There are (1) objects with this label

Thermal conductivity: lambda_x=0.54 [W/(K*m)], lambda_y=0.54 pW/(K*m)]
Volume heat:
Q=1e7*impulse(x,0.05/60*t,0.05/60*t+0.003) [W/m3]
Specific heat: C=440 [J/(kg*K)]
Mass density: rho=1500 [kg/m3]

Labelled objects: edge "BoneSurface"
There are (4) objects with this label

Convection: alpha=40 [W/(K*m2)], temperature T0=-236.55 [K]
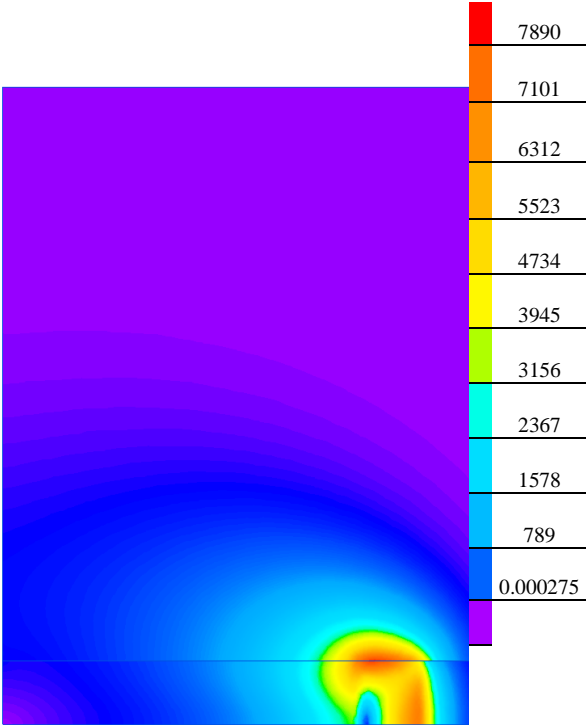

Results

Field lines

Results

Color map of Heat flux |F| [W/m2]

Nonlinear dependencies

No non-linear dependencies are used in this problem data
